

#ITCHING FOR A CURE

AN AWARENESS DAY GUIDE TO PFIC

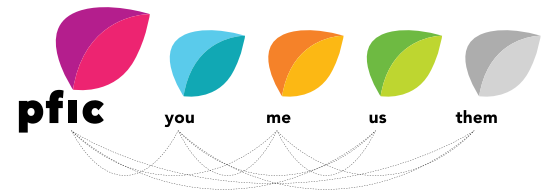

IT'S AN UNBEARABLE ITCH

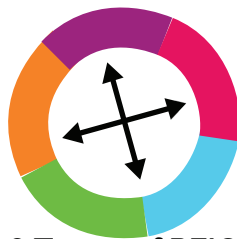

WHAT IS PFIC?

PFIC (progressive familial intrahepatic cholestasis) is a rare liver disease that typically leads to liver failure by age 10. The most common symptom is an unbearable and insatiable itch.

1  IN 100,000  ARE DIAGNOSED WORLDWIDE

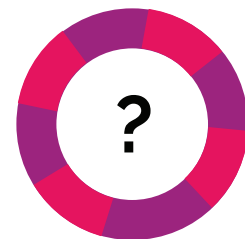

In many cases of PFIC, a liver transplant becomes the only option.

6 Types of PFIC and Counting

We are all Unique

Treatment is Uncertain

OUR MISSION

The PFIC Network strives to improve the lives of patients and families worldwide with PFIC.
